MEMORANDUM FOR: GSA Project Manager

FROM:

Chief, New Building Project Office, OL

SUBJECT: Sprinkler Testing

1. For several months now, we have discussed activating the fire sprinkler system in areas that have been turned over to the Government. The building has matured to the point where there are personnel in the computer centers on a full time operational basis. The design of the building requires the full automatic service of the sprinkler system to meet the applicable codes.

2. As we understand it, the flow switches need to be calibrated and these switches need to be connected to the local fire alarm panel. We urge you to begin this testing in order to provide us with a fully functional system.

3. Please advise this office of your plans for the testing so that we may advise the components occupying space in the building.
